Dear Hiring Manager,

I am interested in the position you listed on LinkedIn . I belive my skills are a good match to be working with you and your team. I am familiar with the tools (C,C++,python,Java) that you require for the job. I have worked on C for over 2 years.

I am presently getting a Masters degree in Computer Science from New York University. Also I work part-time with a startup providing them solutions to make better software products. My latest product required me to gather data from web scraping, APIs or other sources and rank them according to a keyword based algorithm. I learned it requires dedication to be working in a small team and to understand the end user. I also got to interact with the best developers who guided me in developing my software skills in an Agile environment. I am constantly looking forward to upgrade my skills while developing software applications.

I hope my resume helps you understand the application stack I have worked on and also helps you find a better fit for the position you have to offer at CompanyName .

Thank You.

Sincerely,
Kiran Koduru
